PENETRATION TESTING REPORT

Footprinting & Network Scanning Phases

W2-PM-FINAL | CYBERSECURITY | NETWORKWALKS

Field	Detail
Pentester Name (Cybersecurity Professional)	Jerom Mbawa
Program/Batch	B084-Networkwalks
Date	13 November 2026
Modules completed	W2-PM1 (Multiple Kali Tools), W2-PM5 (Zenmap Network Scanning)
Target	networkwalks.com and the tester's own LAN (192.168.100.0/24)
Permission	Authorized under the Networkwalks Letter of Authorization (Week 2)

Liability Disclaimer

This report was produced as part of the Networkwalks Cybersecurity Internship for educational purposes. All activities were limited to the targets named in the Letter of Authorization: the public website networkwalks.com with its associated DNS records, and the tester's own local area network. Only passive and light information-gathering and non-destructive scanning were performed. No exploitation, denial-of-service, password attack, or access to data was attempted. The information in this report is provided as is and must not be used against any system without written permission.

---

1. Introduction

This report documents the reconnaissance work completed in Week 2. It covers two phases:

1. **Footprinting (W2-PM1):** collecting publicly available information about networkwalks.com using six Kali Linux tools: `whois`, `nslookup`, `dnsrecon`, `wafw00f`, `whatweb` and `curl`.
2. **Network scanning (W2-PM5):** discovering hosts and open services on the tester's own LAN with Zenmap/Nmap.

The goal was to build a picture of the target's domain registration, DNS setup, hosting, web technologies and defences, and to map the local network's live hosts and exposed services.

2. Tools Used

Tool	Purpose
whois	Domain registration details
nslookup	Resolve the domain to an IP address
dnsrecon	DNS record enumeration (SOA, NS, MX, A, TXT, SRV)
wafw00f	Web Application Firewall detection
whatweb	Web technology fingerprinting
curl -i	HTTP response header inspection
Zenmap (Nmap 7.99)	Host discovery, port, service and OS scanning on the LAN

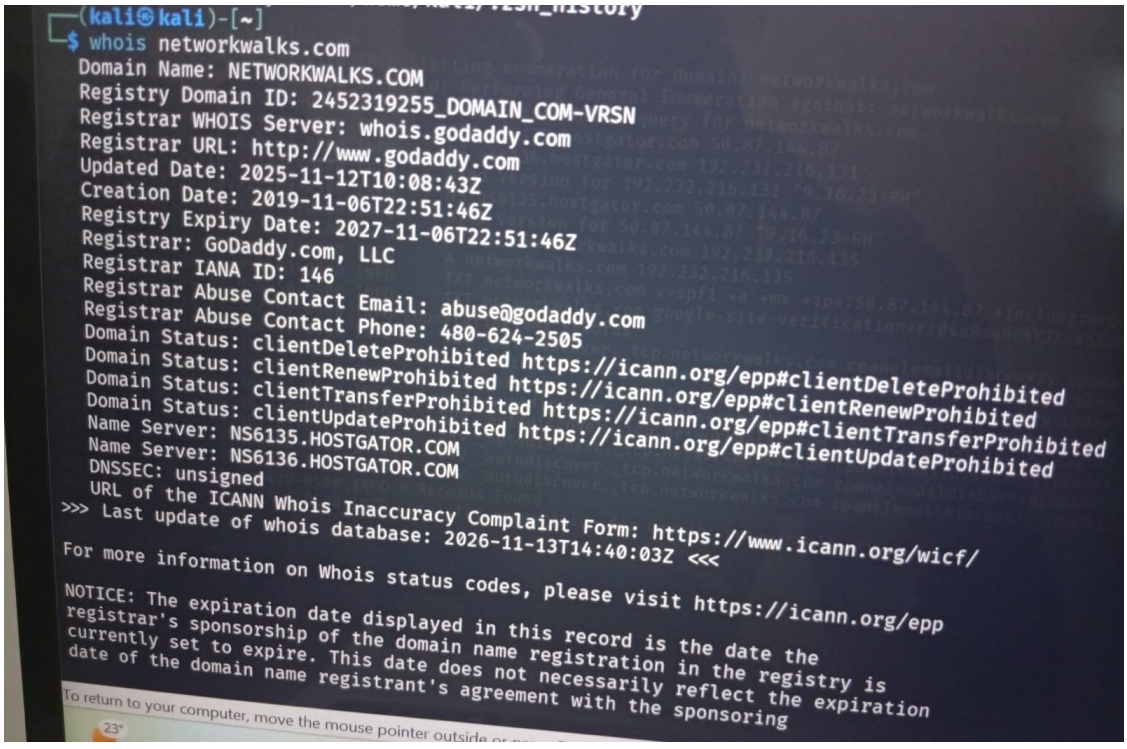

3. Activities Performed

Module W2-PM1: Footprinting with Multiple Kali Tools

Target: networkwalks.com

3.1 WHOIS

NOTICE: The expiration date displayed in this record is the date the
registrar's sponsorship of the domain name registration in the registry is
currently set to expire. This date does not necessarily reflect the expiration
date of the domain name registrant's agreement with the sponsoring
registrar.  Users may consult the sponsoring registrar's Whois database to
view the registrar's reported date of expiration for this registration.

TERMS OF USE: You are not authorized to access or query our Whois
database through the use of electronic processes that are high-volume and
automated except as reasonably necessary to register domain names or
modify existing registrations; the Data in VeriSign Global Registry
Services' ("VeriSign") Whois database is provided by VeriSign for
information purposes only, and to assist persons in obtaining information
about or related to a domain name registration record. VeriSign does not
guarantee its accuracy. By submitting a Whois query, you agree to abide
by the following terms of use: You agree that you may use this Data only
for lawful purposes and that under no circumstances will you use this Data
to: (1) allow, enable, or otherwise support the transmission of mass
unsolicited, commercial advertising or solicitations via e-mail, telephone,
or facsimile; or (2) enable high volume, automated, electronic processes
that apply to VeriSign (or its computer systems). The compilation,
repackaging, dissemination or other use of this Data is expressly
prohibited without the prior written consent of VeriSign. You agree not to
use electronic processes that are automated and high-volume to access or
query the Whois database except as reasonably necessary to register
domain names or modify existing registrations. VeriSign reserves the right
to restrict your access to the Whois database in its sole discretion to ensure
operational stability.  VeriSign may restrict or terminate your access to the
Whois database for failure to abide by these terms of use. VeriSign
reserves the right to modify these terms at any time.

The Registry database contains ONLY .COM, .NET, .EDU domains and
Registrars.

4. Findings

#	Finding	Target	Risk	Recommendation
1	Telnet (23/tcp) is open on the router. Telnet sends credentials in clear text.	192.168.100.1	High	Disable Telnet; use SSH or the HTTPS management page only.
2	Router web management certificate expired on 4 Dec 2024 (and dates from 2014).	192.168.100.1	Medium	Replace the certificate or update the firmware.
3	Router OS fingerprints as Linux 3.5, a very old kernel, which suggests outdated firmware.	192.168.100.1	Medium	Update router firmware.
4	Name servers disclose BIND version 9.16.23-RH.	ns6135/ ns6136.hostgator.com	Low	Hide the version string (`version` option in BIND).
5	DNSSEC is not enabled for the domain.	networkwalks.com	Low	Enable DNSSEC with the registrar/DNS

#	Finding	Target	Risk	Recommendation
				host.
6	SPF policy ends in `~all` (soft fail), which allows spoofed mail to be accepted in some cases.	networkwalks.com	Low	Consider `-all` once all senders are listed.
7	WordPress and plugin versions are exposed (WordPress Download Manager 3.3.76, Yoast SEO 28.8), and the REST API is advertised in headers.	networkwalks.com	Low	Keep plugins updated; limit version disclosure and REST user enumeration.
8	A contact email (info@networkwalks.com) is publicly exposed.	networkwalks.com	Info	Expected for a business; be aware of phishing and spam targeting.
9	Positive: the site is protected by a ModSecurity WAF, redirects HTTP to HTTPS, and sets HttpOnly and Secure cookie flags.	networkwalks.com	Info	Keep these controls in place.

5. Conclusion

Footprinting of networkwalks.com showed a WordPress site on Apache, hosted at 192.232.216.135 and served by HostGator name servers, with the domain registered through GoDaddy and protected by a ModSecurity WAF. The main public exposures are version disclosure (BIND, WordPress plugins), missing DNSSEC and a soft-fail SPF policy; none were exploited.

The Zenmap scan of the local network found 4 live hosts. The router (192.168.100.1) is the main concern: it exposes Telnet, has an expired certificate and appears to run an outdated Linux kernel. The other hosts showed no open ports. Applying the recommendations above would reduce the exposure found in both phases.

All activities stayed within the scope of the Letter of Authorization.
